# WHY CHOOSE US

Hosting Shop uses a custom hosting platform, which can provide regular users with some benefits, usually reserved for virtual or even dedicated servers, such as native support for Memcached and Varnish, the ability to run and manage running background processes, support for PostgreSQL databases, Git and SVN support, etc.

It is built using the ZFS file system, which allows for a strong file compression, effectively reducing the file size of all files hosted with us. ZFS also has a native silent data corruption protection, something invaluable for hosting providers. Users are hosted on fast SSD drives, which allows for much improved I/O rates when compared with regular hard drives. Thanks to the ZFS file system and the SSD drives, we don't have a file quota or I/O limits for our users. Mod\_security is enabled by default, with an even-expanding set of rules, designed to automatically protect your sites.

You can also choose where to host your websites - we offer multiple data centers, located across USA, Europe and Australia.
